I just want to make this perfectly clear: I love Canon's new Creative Cloud software. Honestly, I think it compares well to Photoshop on its own, just because it's such a workhorse, and I'm much more of a command-line kind of person with Windows. And for the fact that I never need to worry about reformatting USB drives and the like. I've been using Creative Cloud for years, and might have stayed if not for the fact that it is a total money pit. I have 12 gigs of space, and I have to explicitly pay extra for additional storage, and I pay 12 bucks for the privilege. As I said, I love it. And there is a lot of peace of mind in knowing that my photos live in the cloud, and that my edits live there as well. And that there are updates, and that I'll automatically get them the next time I plug in my camera or plug in my laptop, and that there's no chance I'll lose them in a fire. I guess I'm saying that I can easily live without the cloud version of Photoshop, but not without the cloud version of my other Creative Cloud features. In an age of increasing PhotoSnappiness, it is not hard to see a future in which any workflow asks for more, not less, Photoshop. This balance between file size, workflow and flexibility trumps any vision of photo editing as a turnkey affair with the ability to do everything right on the screen. Instead, it is a very different proposition, with a lot of choices to make, and the expectation that all of them fit together nicely in a way that is tailored to the task in question, and the way in which you work. So the same tools and features in other programs might make sense in different circumstances, and this can happen because of the sheer breadth of the tools. Photoshop is a very specialised tool, and it can leverage all other aspects of the software ecosystem, within the bounds of what you might reasonably get away with.
