► Change Mic Source to any selected plugin. When you switch plugin, Keymacro change plugin selected path on Pathswitch page to new one. Real time effects can be used when using Keymacro to control the synthesizer. For instance with delay effect: delay before sound played can be set with Keymacro. Some effects can be used with various synth plugin. For instance, the chorus effect can be used with any echo plugin. Now the list of effects is extended, which includes a reverb effect. 9) Effects modules To create the reverb effect, you have to set a delay with A=4 and C=4. This effect is without saturation. You can use VCA to create the effect, which creates a patch with an amplitude modulation. With the AmpVCV control you can set the amount of modulation and the modulation wave. There is also a sweep which can be used to sweep different amounts and waveforms in real time. 10) Modulator To create the modulator, you have to set a frequency with A=4 and C=4. If you set the output port with XX=1, then the wavetable patch can be controlled in real time. You can use different waveforms to create the effect. 11) VCO To create the VCO, you have to set a frequency with A=4 and C=4. You can use the sweep control to sweep the modulator and VCA, but it is useless, because no modulator or VCA is used. There is an amplitude modulation which can be used to add a little bit of modulation. 12) LFO To create the LFO, you have to set a frequency with A=4 and C=4. You can use the sweep control to sweep the VCO or the modulation. The LFO can be used to sweep over the VCO and the modulation. 13) Operator To create the Operator, you have to set a frequency with A=4 and C=4. This parameter allows you to change the pitch of the synth directly on a MIDI channel. 14) Filters The filters are available in two versions. For one version you can set the resonance control with A=0 and C=0. There is also a high pass filter control available, which allows you to create a 2edc1e01e8

This software came after some bad experiences with the Akai Miniak. In my last experience, i couldn't even load my presets via miniakeditor. I have downloaded the software and start it. The software work with a few possibilities and are ok with the system at the beginning. But for any presets that are from Miniak Editor are not working at the beginning. I have done some tests and couldn't get it to work with the Miniak. I have tried the USB interface of the Miniak Editor. I tried to record and send the preset via the software but without success.
