As a Lightroom user, I will tell you that a hardware upgrade is one of the best ways to improve your experience in this program. It's because you had to put in that extra cash, upgrade your memory, guts (CPU) and back-end (storage) to get the software to perform. You'll thank yourself for putting in the extra money in your wallet. The ads on the side of this blog, will also tell you the best camera to buy based on your budget. But after reading, take my advice from that. Lightroom, the new beta version for my Adobe Photoshop CS2 software, is a lot better than the last version I worked with. It's smoother, faster, more user friendly and is in general easy to use. It enhances the editing power of PS.

As always, we hope you will leave your comments on what you think of this new version of Photoshop. As always, we are open to hear your suggestions as how to improve the blog. We're just people too, and we're always looking for advice. The difference in speed between Lightroom 5 and CS4 isn't as major as it appears to be, and Lightroom 5 is certainly more stable. That said, Lightroom 5 has some really neat new features to offer. In this article, I'll take you on a tour of the new features that are available in the updated version of the software. The update to the Gold Refine tool, which is a part of the Warp Stabilizer filter, is a big one, since it allows you to stretch the borders of your images to make them look like frames from movies, which is nice. Unfortunately, this does not work as well on real videos, so there isn't much use for it. The biggest improvement, though, is the ability to create forms from your images. Once you add a form, it becomes a template that you can use Photoshop as a workspace, and you don't even have to save your workspace file to make a new image. It is all facilitated by an intelligent AI that also takes everything into consideration, when relocating the elements of the template around. And, of course, imports and exports are much faster thanks to transparent updating. Even playing back an animation is faster than before. And with the "run a simulation" feature, a whole series of actions can be performed in a very short amount of time. Seriously, it is hard to believe that Lightroom is only a few years old, but in Photoshop, the changes are very smooth and cohesive, and often addictive. Hopefully, the updates will continue to be more regular, especially in the year ahead, so that we also have more other improvements to look forward to.
