If you want to take a full inventory of the new CC package, press the Window button on top of your keyboard in Photoshop. (In other apps, you'd press the Alt button.) Remember, Adobe doesn't seem to be putting emphasis on this new feature, and the Window button is on the right side of the keyboard instead of the left side. Sure enough, both the Windows menu and a Windows Explorer window open up, with commands that work like they have for a long time. Recent files, custom commands, information etc. all are located under the Window menu. Adobe often updates the actual app title. In this case, the window is called Photoshop CC 2015. You can add more windows, but I haven't found any way to get rid of that window, which is odd because it's not what this review is about. However, Adobe has now tried to incorporate some of these features into Lightroom 5. Equally as sophisticated are the AI-driven capabilities. For example, the AI technology in Lightroom 5 will automatically adjust the White Balance of an image based on the temperature of the surrounding environment. During the years, Adobe worked hard on Lightroom and Photoshop, whereas a fruitful change came from the ways traditional software were used. The way people use software is different than how it was used years ago. It is time that software companies change along with how people use it, so that it serves its current purpose. It appears that Lightroom is only a tad faster than Lightroom 4 when opening a catalog. A closed catalog can take a good amount of time – because Lightroom is in the process of merging the catalog for each image and resolving metadata issues that occur when putting multiple images in a single catalog.
