As an avid user of Photoshop for close to a decade, I can say that Adobe has made some cool additions to the software over the years.. And, as anyone who has used Photoshop for any length of time recognizes, it is a pretty powerful application. The downside is that Photoshop has been going through some growing pains. Company officials have said there's been massive growth in software sales for photo editing tools, and that's led to a bigger and more diverse customer base. And the launch of Photoshop CC and the Creative Cloud subscription service are supposed to help address that. There's no longer a separate "Experience" and "Standard" version of Photoshop that requires you to make a choice. There's only CC, and you'll find the tools you need regardless what you use. In fact, there's a bunch of new features — such as AI, filters, and tools I haven't even talked about yet — that are made available only to Creative Cloud customers.
