The new File dialog box has been revamped with a new way to navigate through documents, with a new view called Document that provides easy access to file structures, or at least, ones that navigate through layers, selections, and groups. You can also create your own custom layouts. And for those who always wanted to have their layouts floating over the page, or collapsible, or wherever, a new panel has been added to the File dialog that you can drag and drop to place a layout you'd like.
